

The ability for XM and other Satellite Radio companies to offer regional and local programming on a nationwide basis is important to me. I live in New Jersey and frequently take trips down to the Annapolis MD/Washington DC area and up to Boston Ma. Being able to listen to traffic and weather for those locations while I am still hours away helps me determine the best routes to take and if I have time to make stops along the way. Occasionally I will tune into the traffic and weather for places I have no intention of going to just because I am curious. Please do not do anything to limit what XM and other Satellite Radio companies can do with their bandwidth.
